Easy and fast change in open offices.

Kiss collection helps you quickly and easily reorganize work spaces to meet your needs. In addition to creating work spaces in open offices, Kiss collection can also be utilized to create lounges, waiting rooms, socializing areas and meeting spaces.

Kiss offers functional and flexible solutions for your needs in living spaces. Suitable for separating units from one another, Kiss panels facilitate creating alternative space designs in open offices for meetings, team projects, individual efforts, and breaks.

Corner modules of Kiss collection panels can be combined in different ways to create various combinations, facilitating lining out sections and defined spaces in work spaces, as well as social areas like cafés and restaurants, and waiting rooms.

Allowing you to easily and quickly create alternative layout plans, Kiss also features a windowed version,

enabling physical connection with the environment and providing light transmittance. Coming at carefully calculated heights, Kiss panels minimize environmental impacts, facilitating meetings and individual efforts alike.

Kiss pouffes provide a footrest with their cushion, while preventing the mess and visual pollution in living spaces caused by cables.

Kiss panels and pouffes easily blends into usage space thanks to a rich choice of colours, introducing colourful motion to the area.
