Varto Collection

Design by **Nurus D Lab**

Flexible and functional solutions for open-offices.

Varto was designed to provide flexible and functional solutions for varying working habits and open offices. Establishing defined spaces via panels of varying sizes, Varto helps you organize spaces to suit your requirements.

Varto creates spaces within spaces to facilitate organization of living spaces to suit the needs. Varto helps split the space in many areas including open offices as well as social areas, hotels, and waiting rooms with 4 different height (107, 137, 167 and 197 cm) and 4 different width (60, 80, 100 and 120 cm) choices.

197 cm high version of Varto can be mounted with a door; Varto also features the option to hang metal and melamine cabinets and metal shelves according your requirements.

With electrification strips, Varto panels deliver electrical cables from ground to desktop, preventing cable mess and visual pollution, while providing easy access to electrical connections for employees.

In open offices, Varto enables you to create workspaces, waiting rooms, lounges, and meeting spaces, as well as storage areas, information desks, and reception areas. Varto collection not only helps divide larger areas into sections and separate departments from one another, but also facilitates establishing customizable personal areas and helps increase interaction between employees.

You can prefer Varto panel surfaces in fabric, melamine or glass to suit your purpose of use and match interior design features.
